JOIN THE HYGIENE REVOLUTION

Join the hygiene revolution with Refresh'R. A complete assortment of grooming and cleaning products for dogs, cats, small animals and birds. All products contain Byotrol, an antibacterial and antifungal ingredient, which will eliminate the causes of bad smells.

Byotrol is an amazing world changing technology that will protect you and your pet in a much safer and more caring way than previously believed as possible.

Unlike many of today's products, Refresh'R products **kill 99.99% of germs and viruses under 30 seconds** and can do even a lot more compared to other products.

- 1. up to 24 hours active protection on skin and fur and up to 7 days on hard surfaces**
Firstly, Byotrol keeps working **wet and dry**, creating a microscopic barrier on any surface, actively killing germs for days and not for minutes; long after other products stop.
- 2. alcohol-free, gentle and safe**
Secondly, though deadly to germs, Byotrol is **harmless** to all other living things. Meaning it is ultra gentle on humans and pets around your home and theirs.
- 3. environmentally safe and non-toxic**
All the components of Byotrol are listed and accepted on the **European Biocidal Derective lists**. Byotrol has also been tested to the European Standards EN1276 and EN 1650.

No other technology can deliver this combination of protection and gentleness.

REFRESH'R IS UNIQUE IN COMBINING ALL 3 HYGIENE STEPS IN A SINGLE APPLICATION:

1. CLEANS

gross contamination

2. DISINFECTS

germs + residual odour

3. PROTECTS

LONG-LASTING PROTECTION AGAINST PET DISEASES!

Effective cleaning of the pet and its environment is essential for the well-being of the animal. The power of Byotrol to **clean, disinfect and protect in a single application** not only ensures the animals' safety, it saves time and money.

Unlike ordinary disinfectants, which only work when they are wet and are often so aggressive that they must be rinsed away before the animals can return, **Byotrol** carries on working for **up to 7 days** on hard surfaces and is **safe for the animals** even while it is still drying.

The Refresh'R cleaning products are effective against most common viruses, bacteria, yeasts, moulds and algae including Swin and Avian Flu, MRSA, E.coli, Salmonella, Listeria, Pseudomonas aeruginosa and Aspergillus niger.

The Refresh'R cleaning products can either be used to clean up **gross contamination, cages and pet accessories** or simply to freshen up **fabrics and furnishing** in the home or car.

REVOLUTIONARY CONTROL OF PET ODOURS!

It's the microbes in the pet's coat, which create bad odours. Overcome the microbes and you overcome the smell. The physiology of dog, cat and small animal fur is very similar and the same principle applies to each animal type.

Many dogs roll in unpleasant messes. The **deodorising wipes** are an effective way of **removing the gross contamination** and then cleaning any **residual bacteria** from the coat.

Wet dog smell is caused by **odour molecules** attaching themselves to water particles as they radiate into the air. The **Refresh'R deodorising wipes** help **eliminating the microbes** at source while they are trapped against the dog's skin.

Older cats and longer-haired breeds often need **help** with their **grooming** and are not as resistant to grooming as many might expect. The **Refresh'R grooming wipes** help to **trap dirt and loose hairs, which may cause hair balls**.

Small animals all have their own **peculiar smell** often exacerbated by living in a confined environment. The **Refresh'R deodorising wipes** will **trap dirt and loose hairs** and **cover your pet's coat** with **Byotrol**. **Keeping the cages as well as the animals clean is essential for the well-being of the pet.**
